1. Edit your original project that contains SumActivity. Add a button to the initial screen that switches the user to a screen that has tabbed windows.

2. Have the first tab invoke the SumActivity by class name, with no data.

3. Have the second tab invoke the SumActivity by class name, with randomized “extras” data.

4. Have the third tab invoke the SumActivity by URI, with no data.

5. Have the fourth tab invoke the SumActivity by URI, with randomized URI parameters.
