

Exercises: Deploying Apps to Tomcat

Once you have Java, Eclipse, and Tomcat set up, this entire exercise can be done in 5 minutes if you followed the steps from the notes.

- 1.** Take your HTML, CSS, and JavaScript code from the previous set of exercises (Getting Started with jQuery), put it into a Dynamic Web Project in Eclipse, deploy it to Tomcat, and access it from `http://localhost/app-name/file-name.html`.
