

PrimeFaces Exercises:

Number Input

Make a new PrimeFaces project.

- 1.** Make a page with an input form that has a spinner that lets the user select how many SuperBowl tickets they want to order. Force a value between 2 and 10 inclusive. Have the bean property be of type int. Have a confirmation page that simply says “You bought x tickets”.
- 2.** Make an input form containing a spinner that lets the user choose how many pounds of coffee they want to order. Force a value between 0.25 and 10.00 pounds, and let the user change the value in 0.25 pound increments. Have a confirmation page that simply says “You ordered $x.y$ pounds of Java”.
- 3.** Make an input form with one slider that lets the user choose how many apples they want to buy, and with another slider that lets the user choose how many oranges they want to buy. Force a value between 0 and 100 for each. Have a confirmation page that shows the total number of pieces of fruit purchased. Hint: use `h:panelGrid` or other HTML to control the width of the slider.
